## Air-Lance / Air-Whisper

## VENTILATION SYSTEM, GRAIN VENTILATION SPEAR

### Description:

With the ventilation spear, you can remove heat spots within the grain; this protects you from large losses at minimum effort.

The ventilation spear is easily inserted into the grain and with the turn of the handle moved to the desired hot spot.

The ventilation spear cools and dries the grain around its periphery and can then be moved to other spots for systematic ventilation of the entire grain store.

The AIRWHISPER ventilates by suction, the AIRLANCE however can suck and blow to give optimum results. The direction of airflow is changed by reversing the position of the fan.

The AIRWHISPER is delivered complete with a plug (230 V), the AIRLANCE is delivered completely with a motor circuit breaker and a connector (400 V)

Technical Data	Airwhisper	Airlance
Motor:	150 W	1,5 kW
Volume of air:	250 m <sup>3</sup> /h	2800 m <sup>3</sup> /h
Length:	2,5 m	3,0 m
Perforated tube length:	0,8 m	1,5 m
Non-perforated tube length:	1,2 m	0,5 m
Length of tip:	0,25 m	0,25 m
Approximate weight.:	13 Kg	36,0 kg
Ø of perforations:	1,5 mm (suitable for rapeseed)	1,5 mm (suitable for rapeseed)
